SUMMARY

Final-year ECE student at NIT Srinagar and **LeetCode Knight** with 1000+ DSA problems solved in **Java**. Full-stack developer (**React, Node.js, MongoDB**) who has built **scalable, real-time, event-driven**, and **payment-secure** systems using **Kafka, Redis, Docker, and Kubernetes**. Hands-on with **AI/ML**, including **OpenAI APIs** and **OpenCV**-based computer vision, seeking a full-time **Software Engineer** role (2027 graduate).

EXPERIENCE

Full Stack Web Developer Intern May 2026 – Jun 2026
Cantilever Remote

- Built a **full-stack social media platform** supporting **50+ concurrent users** using **Node.js, Express.js, MongoDB, and React**, with core features including **follow/unfollow system**, **real-time chat**, and **live notifications**.
- Designed **JWT-based authentication** with **role-based access control (RBAC)** and structured **MongoDB schemas** with indexing on high-traffic collections for fast feed and chat retrieval.
- Implemented **real-time features** using **Socket.io** for live chat and notifications, handling events like new messages and follow updates, and debugged **race conditions** in concurrent user operations.

PROJECTS

AI-Powered Smart Attendance System | **Python, SQL, OpenCV, Streamlit, Flask** GitHub | Live Demo

- Built a **QR-based, self-service enrollment system** that lets teachers create courses instantly and share a scannable link or downloadable QR code, eliminating manual roster entry for student sign-up.
- Engineered a **dual-modality biometric verification pipeline** combining face and voice recognition with OpenCV, providing a resilient fallback mechanism when either signal fails to authenticate reliably, backed by a relational SQL schema that prevents duplicate or proxy attendance across sessions.
- Delivered a **dual-interface architecture** — a Flask-based portal for student self-registration and attendance marking, and a Streamlit dashboard for teachers to **monitor, filter, and export attendance records**.

Job Portal Web Application | **MERN Stack, Docker, Kubernetes, Kafka, Redis** GitHub | Live Demo

- Built a full-stack job portal with role-based dashboards for job seekers and employers, featuring location- and category-based search with secure JWT authentication across both user types.
- Architected an **event-driven backend** using Apache Kafka for asynchronous processing of job applications and notifications, with **Redis** caching hot queries and enforcing API rate-limits to reduce database load.
- **Containerized** the application with Docker and orchestrated deployment via **Kubernetes**, automating builds and releases through a **CI/CD** pipeline on GitHub Actions, with WebSockets powering real-time application-status updates.

Property Booking Platform | **MERN Stack, MongoDB, Razorpay** GitHub

- Engineered a full-stack property booking platform with **JWT authentication**, search, filtering, pagination, and **MongoDB indexing** on frequently queried fields, optimizing data retrieval for scalable property discovery.
- Integrated **Razorpay** with server-side order creation and **signature verification**, and implemented **atomic booking-status updates** to prevent payment tampering and **double-booking under concurrent checkout requests**.

EDUCATION

B.Tech in Electronics and Communication Engineering 2023 – 2027
National Institute of Technology Srinagar GPA: 7.57

SKILLS

Programming Languages: Java, Python, JavaScript, SQL
Core Computer Science: Object-Oriented Programming, DBMS, Operating Systems, System Design, Data Structures & Algorithms
Frontend: React.js, Redux, HTML, CSS, Tailwind CSS, Material-UI
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, WebSockets, Razorpay
Databases: MongoDB, MySQL, Redis
System & DevOps: Docker, Kubernetes, Apache Kafka, CI/CD (GitHub Actions)
AI / ML & LLMs: OpenAI APIs, Prompt Engineering, Agentic AI Concepts, OpenCV, Face Recognition, Streamlit
AI Coding Tools: Cursor, GitHub Copilot, Claude, Gemini
Tools : Git, GitHub, VS Code

ACHIEVEMENTS

Cursor AI Hackathon Contributor — Contributed to open-source AI-powered development tools, gaining hands-on experience with LLM integration and agentic AI workflows in production systems.
Solved **1000+ DSA problems** across LeetCode, GeeksforGeeks, and Codeforces, demonstrating strong logical reasoning and algorithmic problem-solving skills.
Achieved a **1864 (Max) rating on LeetCode contests**.
Secured **Rank 159** in LeetCode **Biweekly Contest 190**.
